

Java

```
class Solution {  
    public int minCostSetTime(int startAt, int moveCost, int pushCost, int targetSeconds) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number} startAt  
 * @param {number} moveCost  
 * @param {number} pushCost  
 * @param {number} targetSeconds  
 * @return {number}  
 */  
var minCostSetTime = function(startAt, moveCost, pushCost, targetSeconds) {  
  
};
```

TypeScript

```
function minCostSetTime(startAt: number, moveCost: number, pushCost: number, targetSeconds: number): number {  
  
};
```

C++

```
class Solution {
public:
    int minCostSetTime(int startAt, int moveCost, int pushCost, int targetSeconds) {

    }
};
-----
```

C#

```
public class Solution {
    public int MinCostSetTime(int startAt, int moveCost, int pushCost, int targetSeconds) {

    }
}
-----
```

Kotlin

```
class Solution {
    fun minCostSetTime(startAt: Int, moveCost: Int, pushCost: Int, targetSeconds: Int): Int {

    }
}
-----
```

Go

```
func minCostSetTime(startAt int, moveCost int, pushCost int, targetSeconds int) int {
```

}
